

IronClaw

A secure, extensible, personal AI agent platform

Let's Talk About OpenClaw

How many people here know about OpenClaw?

How many people have used OpenClaw to build something for themselves?

OpenClaw: The Pioneering Platform

OpenClaw emerged as a significant open-source platform, effectively defining the nascent personal AI agent category.

Why OpenClaw's Impact Was Significant

It validated the concept of personal AI agents.

It fostered an early community for AI agent development.

It provided a foundational open-source blueprint for the domain.

OpenClaw's Limitations for Enterprise Use Cases

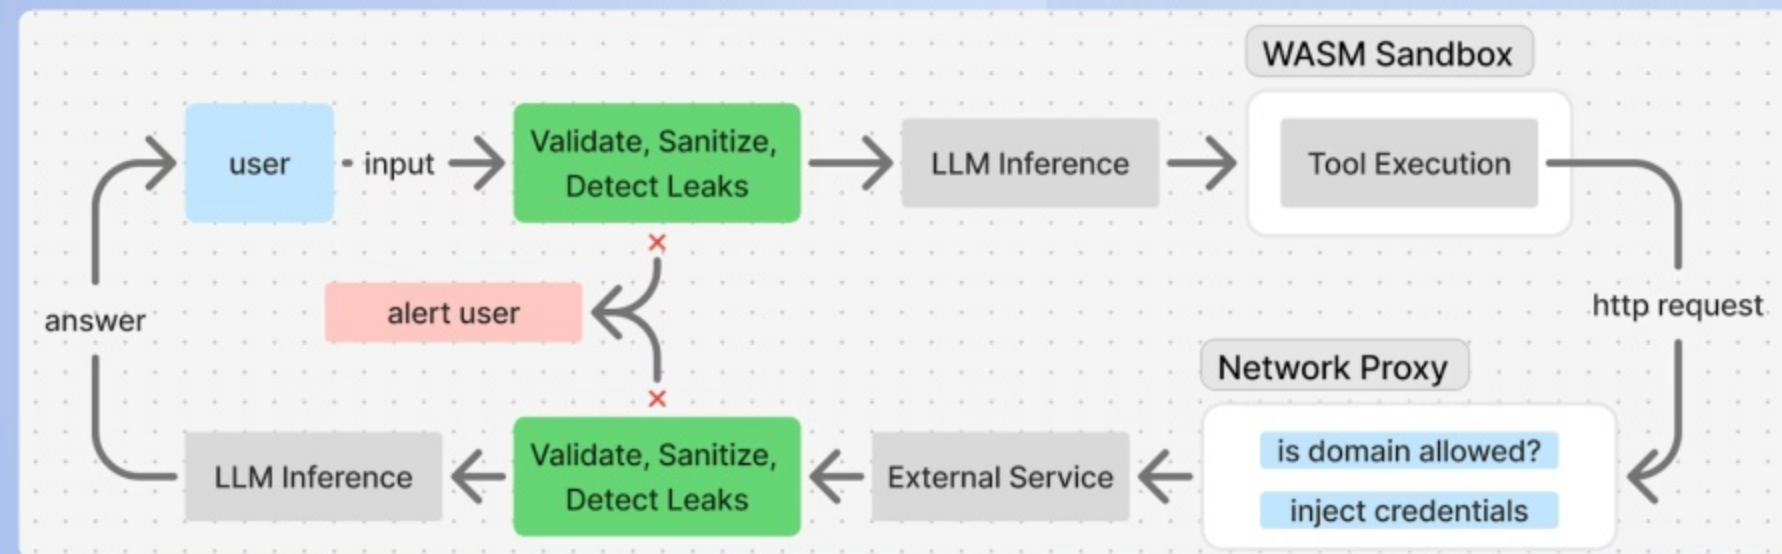

- ➔ Inadequate security boundaries for sensitive data.
- ➔ Limited extensibility for custom agent behaviors.
- ➔ Fundamental architectural challenges for long-term scalability and systems design.

Introducing IronClaw: The Next Evolution

IronClaw is the Rust-based, security-first evolution of the personal AI agent category, designed for robust performance and trust.

Robust Security Architecture

Advanced sandboxing for isolated execution.

Strong credential isolation and management.

Strict allowlisting for controlled access.

Proactive leak detection mechanisms.

Comprehensive defense-in-depth strategies.

IronClaw Product Architecture

Agent runtime for efficient execution.

Secure web gateway for external interaction.

Robust job and routine scheduling.

Dedicated channels for inter-agent communication.

Centralized control plane for system oversight.

Unmatched Extensibility

WASM tools for custom functionality.

Extensible WASM channels.

Modular Component Protocol (MCP) support.

Dynamic skill acquisition and development.

Direction for dynamic, on-the-fly tool building.

Seamless Migration & Adoption

Direct import path for existing OpenClaw configurations.

Intuitive onboarding process for rapid integration.

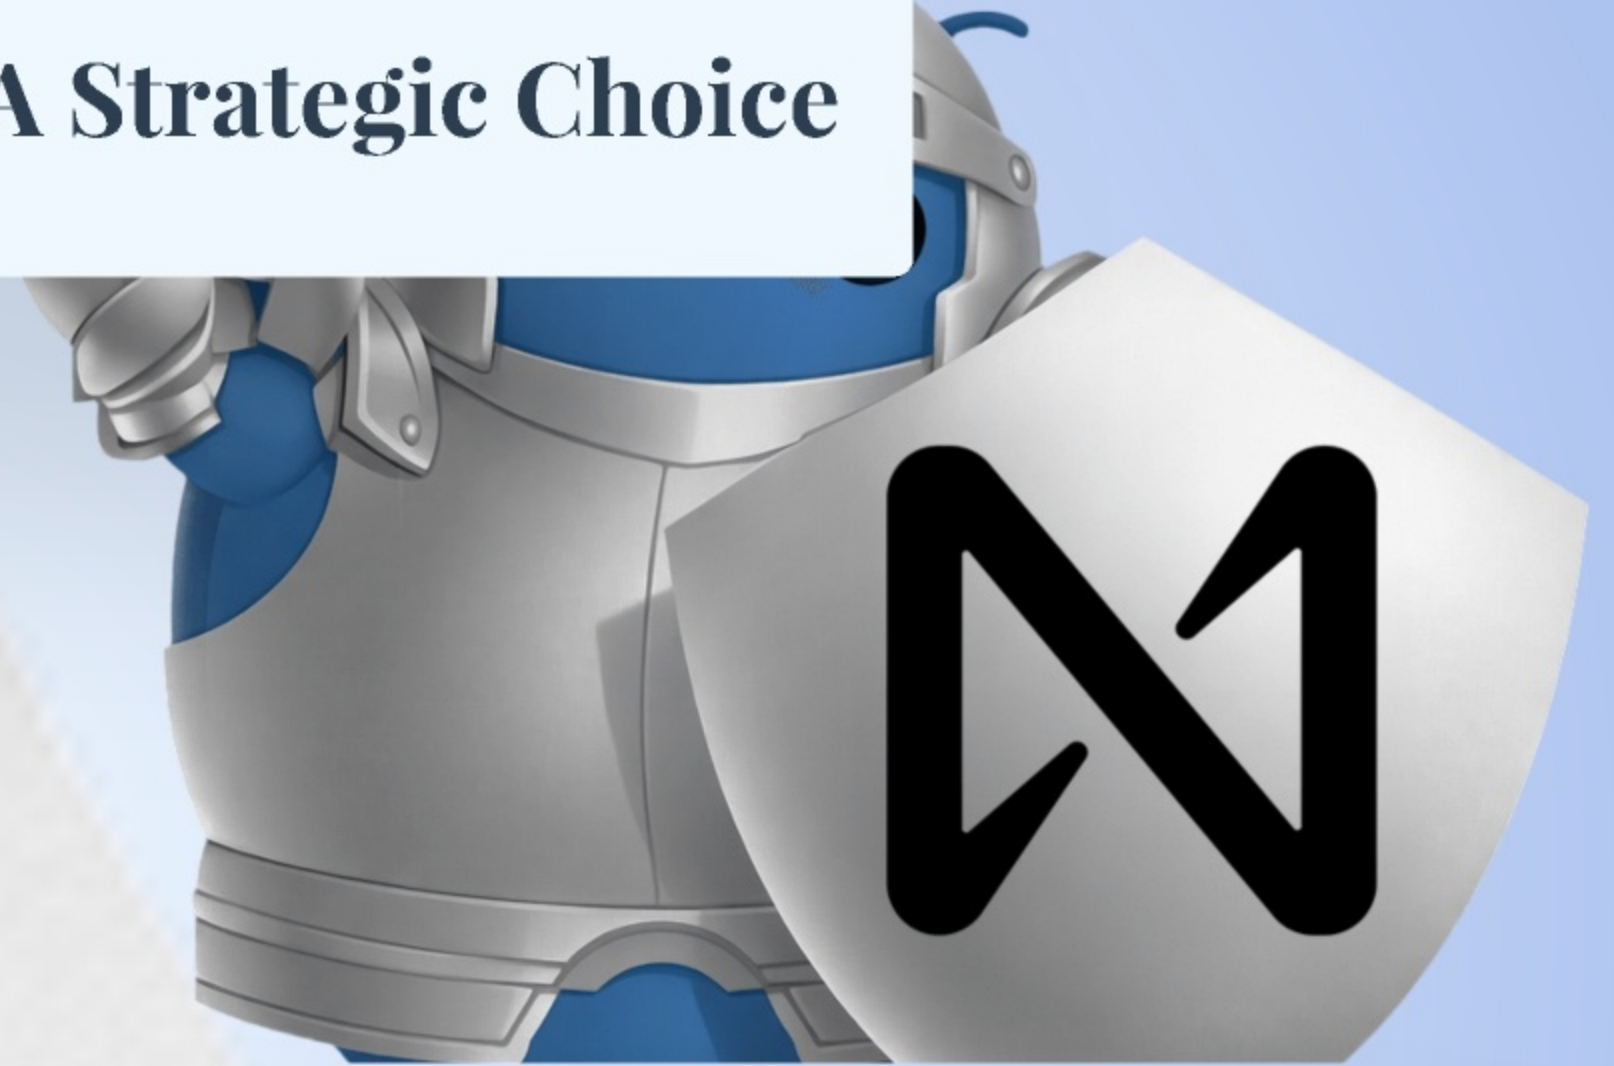

Significantly low switching cost for current users.

IronClaw vs. OpenClaw: A Strategic Choice

OpenClaw: Pioneering but Limited

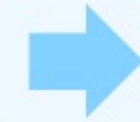

Defined the category with an open-source approach but faces inherent limitations in security and enterprise scalability.

IronClaw: Secure, Scalable, Future-Proof

Built with Rust and a security-first mindset, offering superior architecture for long-term, robust AI agent deployments.

The Future of Personal AI Agents

OpenClaw showed us what a personal AI agent could be.

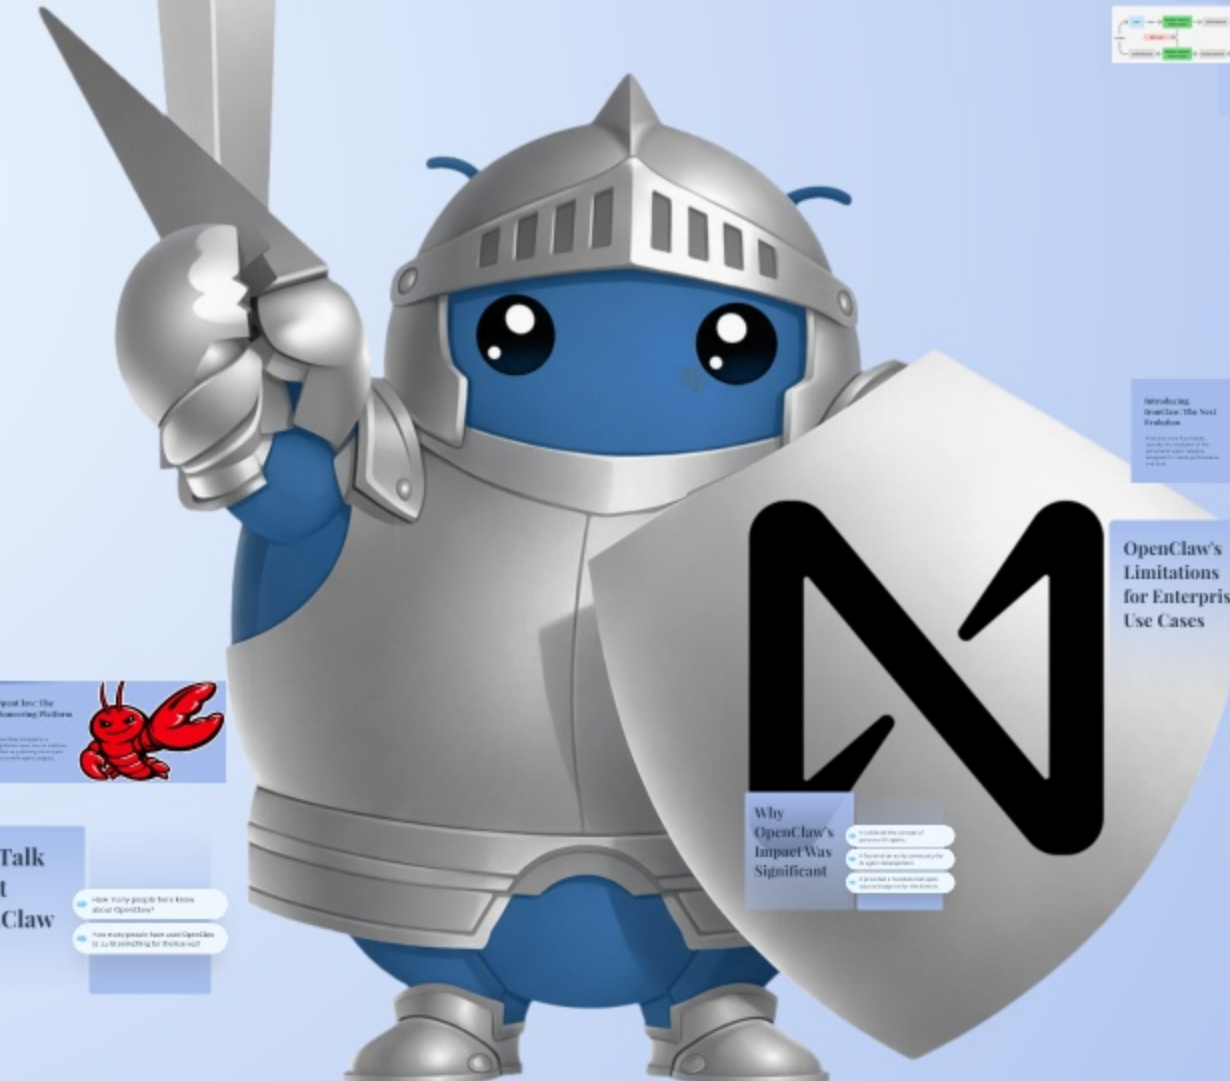

IronClaw is what that category should become: secure, extensible, and reliable.

Spin up your own agent!

IronClaw

A secure, extensible, personal AI agent platform

OpenClaw: The Next Evolution

Introducing OpenClaw: The Next Evolution. A secure, extensible, personal AI agent platform. OpenClaw is the first AI agent platform to be built on a secure, extensible, personal AI agent platform. It is the first AI agent platform to be built on a secure, extensible, personal AI agent platform.

OpenClaw's Limitations for Enterprise Use Cases

- Inadequate security for sensitive data
- Limited extensibility for custom agent behaviors
- Limited integration with existing systems

Why OpenClaw's Impact Was Significant

- A secure, extensible, personal AI agent platform
